In-Class Assignment L3-1: Quick Select (Group of 2 to 3)

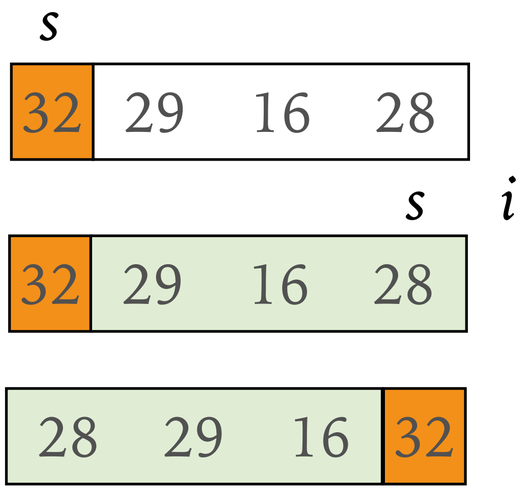

(25 minutes) Submit to LEB2

☐ Consider the test scores of 6 students -- A: 33, B: 29, C:16, D:28, E:32, F:34.

- Use QuickSelect() to determine the 4th-lowest score student. Show the list content and how the loop indices are updated in each iteration of `LomutoPartition()`.
- Who are the four students with lowest scores ?
- Who are the two students with highest scores ?

$s = k - 1$ (3) Stop.
4th smallest element = 32

Also identify $k - 1$ or k smallest elements
and $n - k$ or $n - k + 1$ largest elements as by product.
